

# Emerald Glow LED Grow Lights

Green Your Grow

Grow Strips

## Start Right with Emerald Glow LED Grow Strips

SolSolutions Emerald Glow LED Grow Strips are the best in class low voltage, super efficient and powerful LED grow lights. These LED Grow Strips have a high color rendering index (CRI), which is a real full spectrum of white light, as well as a great color temp, with a specific use in high-grade horticulture.

LED Grow Strips are IP66 rated and completely waterproof, with total submersion in water possible. They can be used for complete replacement of florescent T-5 fixtures or HPS/metal halide lights and use half the energy of a florescent T5.

Emerald Glow LED Grow Strips are perfect for inside vegging to grow moms, clones, or any starts in a completely controlled environment. They can also be used for greenhouse season extension and lighting supplement to increase your production and growth cycle. This assists your plants, especially in the off-season and lower light conditions, to continue to grow at their peak potential.

These LEDs are prime for extensive inside or greenhouse commercial installs where you need coverage for a bigger space. The low voltage means you can run several strips safely when combined with drivers (required and sized to strip volume) and light-gauge wire.

Grow Strips allow you to do a variety of hanging and install setups. They are the absolute best option for NEC compliant wet location electrical installation.

SolSolutions offers our LED Grow Strips in two sizes of Emerald Glow Clone Rack Kits, three sizes of Emerald Glow Hanging Fixture, or as part of custom designed systems to work for your needs (custom pricing based on coverage area and setup).

## Emerald Glow 4' Grow Strip Specifications

- \* IP66 Rated
- \* 24 Watts
- \* 96.2 CRI
- \* 5000 Kelvin
- \* 2796.7 Lumens, 120.5 Lumen Efficacy (lm/w)
- \* 410 Par (6"), 310 Par (12"), 225 Par (18") on 4 Strip Rack
