

Emerald Glow LED Grow Lights

Green Your Grow

Clone Racks

Start Right with Emerald Glow LED Clone Rack Kits

SolSolutions Emerald Glow Clone Rack Kits utilize Emerald Glow LED Grow Strips to give a variety of options for growing plants in commercial and residential locations.

Emerald Glow LED Grow Strips are the best in class low voltage, super efficient and powerful LED grow lights. These waterproof LED Grow Strips have a high color rendering index (CRI), which is a real full spectrum of white light, and a great color temp, with a specific use in high-grade horticulture.

Emerald Glow Clone Rack Kits are IP65 or above rated, perfect for NEC compliant wet location electrical installation. These LED systems are prime for extensive inside or greenhouse commercial installs where you need coverage for a bigger space.

LED Clone Rack Kits can be used for complete replacement of florescent T-5 fixtures or HPS/metal halide lights for inside vegging to grow moms, clones, or any starts in a completely controlled environment. These racks take up half the floor space and can double your output for a comparable T5 fixture by going vertical.

SolSolutions offers two sizes of Emerald Glow Clone Rack Kits to fit your growing needs.

Emerald Glow Clone Rack Kit Pricing

Emerald Glow LED Bonsai Clone Rack Kit - 170 watts total
6 Grow Strips for 3 rows of 2 strips, with drivers and electrical parts **\$699**

"Dark Heart Nursery has tripled production and cut energy usage in half by using SolSolutions Emerald Glow LED Clone Rack Kits! Additionally, install costs were reduced by 60% compared to what we would have spent going code compliant on electrical for commercial wet location production. We recommend these LEDs to anyone in agriculture who is looking to be more sustainable."
